

TonSense Yield

Technical Specification — Hackathon Wave 2

STON.fi Vibe Coding Hackathon · June 4–8, 2026 · Deadline: June 8, 8am UTC

"Find where your crypto earns the most. Swap in one click."

One-liner:

Cross-chain yield comparator built on Omniston, powered by Mira AI.

Context:

TonSense Yield is a spin-off of TonSense (tonsense.app), built during Wave 2 of the STON.fi Vibe Coding Hackathon. It solves a simple problem: most TON holders don't know where their assets earn the best yield across chains. This tool shows them — and lets them act on it instantly via Omniston crosschain swaps.

Hackathon Tracks

Track	Requirement	Prize
STON.fi Track	Omniston Crosschain SDK (v1beta8)	\$250 / \$150 / \$100
Mira Track	Integrate Mira AI agent	\$200 / \$100
Participation Pool	Valid submission	Share of \$700 STON

Tech Stack

Layer	Technology
Framework	Next.js 14 App Router + TypeScript
Styling	Tailwind CSS (glassmorphism, #080810 bg, #0098EA accent)
Crosschain Swaps	@ston-fi/omniston-sdk-react (v1beta8)
Wallet	TON Connect 2.0
AI	Mira AI (Telegram bot or embedded chat)
Infra	Vercel (deploy) + Upstash Redis (if needed)
Dev tool	Claude Code

Screens & Features (MVP)

Screen 1 — Yield Table (Home)

- Table of assets: USDT, TON, USDC
- Columns: Asset | TON APY | ETH APY | Base APY | BNB APY | Best
- Each row has a 'Swap to best' button
- Wallet connection via TON Connect at top right
- Best APY column highlighted in green

Screen 2 — Swap Modal

- Pre-filled with best chain/asset from the selected row
- From: chain + asset (user's current position)
- To: chain + asset (best yield destination)
- Real-time quote via Omniston RFQ flow
- Transaction simulation before confirm
- Confirm Swap → on-chain execution via Omniston

Screen 3 — Mira AI Chat

- Floating button → opens sidebar chat
- Mira knows: current asset, APY data, crosschain context
- Strict topic guard: only DeFi / TON / yield topics
- Example: 'Why is TON yield higher than ETH right now?'
- Example: 'Is it safe to do a crosschain swap?'

APY Data

MVP: hardcoded realistic figures. V2: live fetch from DeFiLlama + Tonstakers API.

Asset	TON (Tonstakers)	Ethereum	Base	BNB Chain	Best
TON	~5.2%	—	—	—	TON
USDT	~4.1%	~2.8%	~3.5%	~3.2%	TON
USDC	~4.0%	~2.9%	~3.6%	~3.1%	TON

Task Distribution

Artur (code)	Friend (TON expertise + ideas)
Next.js project setup + omniston-sdk-react	Research which pairs Omniston supports
TON Connect wallet integration	Real APY figures (DeFiLlama research)
UI: Yield Table + Swap modal	Mira system prompt (TON DeFi context)
Omniston RFQ integration + swap execution	Verify swaps actually execute on testnet
Mira AI chat integration	Design feedback & UX suggestions
Vercel deploy + Loom video	Fill out submission form

Build Timeline (~30 hours)

Time	Task	Who
Now → +1h	Clone examples/react-app, run locally, understand RFQ flow	Artur
+1h → +2h	New Next.js project + TON Connect	Artur
+2h → +4h	UI: Yield Table with hardcoded APY	Artur
+4h → +8h	Omniston RFQ integration + Swap modal	Artur
+8h → +9h	Mira AI chat integration	Artur
+9h → +10h	Vercel deploy + end-to-end test	Artur

Parallel	APY research, pairs check, Mira prompt	Friend
June 8, 8am UTC	DEADLINE — Submit	Both

Submission Checklist

- New GitHub repository (not TonSense)
- Live URL on Vercel (must be in production)
- Loom video — max 5 minutes
- Omniston Crosschain SDK (v1beta8) integrated
- Mira AI integrated
- TON Connect wallet works
- Swap actually executes on-chain
- One-liner + short description (blurb) ready
- Project name: TonSense Yield
